

## One person to do it all

### improved service

PIBAS ID is a stand-alone application that allows the user to perform multiple tasks in one sitting with much greater efficiency when dealing with a new client. Instead of having to provide the required basic information, photo & signature, all the client has to do is hand over his National ID card. The user then inserts the card into the reader and the personal information, ID photo & signature of the client will automatically be picked up and sent to the appropriate modules. Furthermore, the application will also perform a blacklist check of the ID holder against lists published by OFAC and the UN. This is just scratching the surface in terms of what this application can do and already the increase in efficiency and productivity is clearly visible.

our goals are to increase  
efficiency & productivity

## Assigning a new BRN\* and Opening a new account

### increase productivity

The more advanced features of the PIBAS ID module include the capability of setting up a new business relationship record as well as opening a new account for a client. These are both optional and can be created later on within the CORE application, however carrying out these tasks here will greatly improve the processing speed, thereby increasing productivity. There will be no need to open multiple modules since the business relationship record and new account info will automatically be updated in whichever CORE application is in use at your institution.
