

## one person to do it all improved service

PIBAS ID is a standalone application that allows the user to perform multiple tasks in one sitting with much greater efficiency when dealing with a new client. Instead of having to provide the required basic information, photo & signature, all the client has to do is hand over his National ID card. The user then inserts the card into the reader and the personal information, ID photo & signature of the client will automatically be picked up and sent to the appropriate modules. Furthermore, the application will also perform a blacklist check of the ID holder against lists published by OFAC and the UN. This is just scratching the surface in terms of what this application can do and already the increase in efficiency and productivity is clearly visible.

our goals are to increase  
efficiency & productivity

## user-friendly data tracking increased efficiency

PIBAS ID presents the user with the ability to designate the purpose of the client's visit to the branch. This added filtering criteria aids in making the search feature more efficient. The current available options include the following:

- Cash Withdrawal
- Cash Deposit
- Account Opening
- Other\*

\*A note section is provided for the user to enter any details that may be required.
